Industrial hardware ready beside every CNC

One device mounts on each machine; no separate PC and no long DNC cabling.

01 Powerful dual-core processor

Stable machine-side operation and serial communication handling

02 8GB internal storage

Stores programs, archives, and essential backups

03 Compatible DNC cable

Short, controlled connection to the CNC serial port

04 Built-in WiFi with strong coverage

Program transfer through the network, without long DNC cables

05 Standard serial protocols

Supports XON/XOFF and CTS/RTS flow control

06 Heidenhain communication upgrade

Compatible with TNC Server and LSV2 for faster transfer

Operator interface beside the CNC

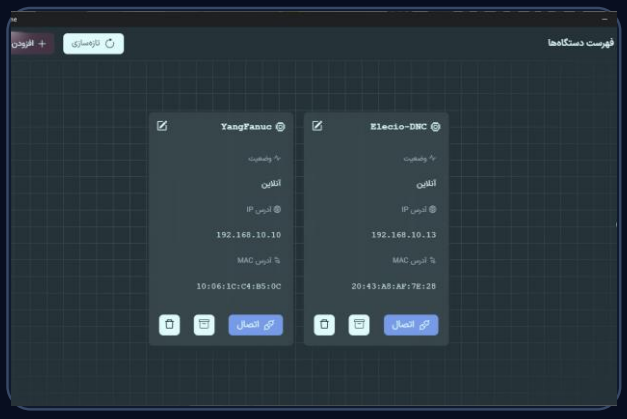

Compatible with major CNC controls

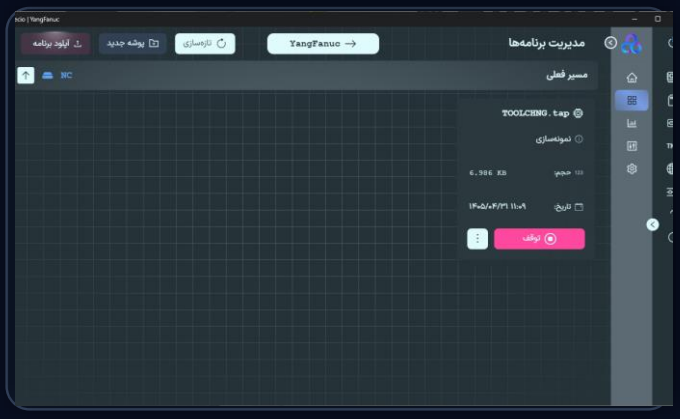

FANUC | SIEMENS | HEIDENHAIN | MITSUBISHI | HAAS | CHARMILLES

Final compatibility is checked before purchase

Dedicated software manage, send, and report

Programs are managed from Windows, Android, and Web App. Machine status is visible to engineering and management.

Transfer status, start/end time, successful runs, and idle time are logged in one traceable flow.

01 Dedicated software

Windows / Android / Web App

02 Program folders

Organize files by job, part, or machine.

03 Transfer status monitor

See transfer progress from the software.

04 Advanced reporting

Overall and machine-level views for shifts.

05 Activity and idle time

Logs runtime, stop time, cycle gaps, and preparation.

06 Machine-side operator UI

Operator receives and runs the file with a simple interface.

Auto repeat for serial production lines

Additional capabilities

- Grouped programs
- Transfer history
- Program backup and archive
